

A Local-First Reading Workflow

A compact sample paper for testing document import, selectable text, reading progress, translation highlights, notes, and portable study records.

1. Reading with Intent

Deep reading is not only the act of moving through pages. It is a cycle of noticing, questioning, translating, annotating, and returning to the evidence. A calm reader interface should preserve that cycle without hiding the document behind tools.

2. Local-First Data

A local-first application stores the source document and study records on the reader's own device. Only text that the reader explicitly selects for translation should leave the browser session. This boundary is simple enough to understand and strict enough to trust.

READER CHECK

Select this sentence to test translation, then add a note and revisit the saved marker.

3. Translation as Memory

Translation is most useful when it becomes durable context. Reusing a cached translation avoids duplicate requests, while a visible blue marker makes the result easy to revisit. Vocabulary cards turn isolated lookups into material for deliberate review.

READER CHECK

Select this sentence to test translation, then add a note and revisit the saved marker.

4. Notes That Travel

Annotations gain value when they can move between devices and people. Stable document fingerprints and normalized page coordinates let a shared notes bundle recover the right page and position without including the original PDF.

READER CHECK

Select this sentence to test translation, then add a note and revisit the saved marker.

5. Conclusion

The best reading tool feels quiet during reading and precise when the reader asks for help. Continuous scrolling supports papers, a two-page book view supports long-form reading, and persistent local records connect both modes.
